Cognizant's Oracle Cloud Infrastructure (OCI) Services

End-to-end cloud services for
future-ready business

More businesses than ever are taking advantage of everything cloud infrastructure has to offer.

The cloud's success is down to several key capabilities that help organizations:

Achieve
operational efficiency

Make
cost savings

Eliminate
performance issues

Improve
security

Adapt
to changing
business needs

Take advantage
of the latest technology
and features

Ensure
regulatory
compliance

But for organizations who haven't yet made the leap to cloud, face several challenges, including:

Outdated infrastructure

where systems are reaching end of life

Performance issues

including noticeable lag, downtime, and inefficiencies

Security breaches

causing unnecessary vulnerability and significant damage

Changing business needs

that require greater agility

Unscalable infrastructure

that can't support technological advancements, such as AI and ML

Deliver the future—today

Oracle Cloud Infrastructure (OCI) is a next-generation cloud designed to run any application, faster and more securely, for less. The only cloud that delivers complete cloud services around the world, across clouds, or in your data center, you get all the tools and services you need—such as AI and VMware—to migrate, modernize, build, and scale your IT. OCI lets you combine cloud services from multiple clouds to optimize cost, functionality, and performance.

Cognizant's Oracle Cloud Infrastructure services are designed to help you get the most out of the cloud, driving innovation, increasing operational efficiency, and generating greater business value. At Cognizant, we're experts at migrating enterprise workloads to OCI, including removing cloud migration challenges, developing business cases and return on investment (ROI) projections, cloud capacity planning, provisioning, cloud migration, monitoring, and post-migration support.

As an Oracle Cloud Solutions Provider Expertise (CSPE) partner, our tested and reliable solution includes application inventory, assessment, code analysis, migration planning and execution, and post migration support. We also design the Oracle Cloud platform around your needs, and deliver end-to-end application stack support under a single SLA.

Cognizant's four-phase approach to cloud migration

1 Strategize and plan
To define the strategy and roadmap for digital transformation and Oracle Cloud adoption. At this stage, we build your migration business case (discover stage) and then evaluate your systems, processes, capabilities, and dependencies (analyze stage).

2 Design
This phase lays down the blueprint and project planning artifacts for structured Oracle Cloud adoption. We design your infrastructure's future state and migration sequencing (design stage) and procure and set up the target cloud footprint (provision).

3 Migrate and modernize
In this phase, we move your applications to the cloud (migrate stage) and ensure alignment with your business objectives (validate stage). The objective is to keep your system up to date with the latest certified versions of databases 19c/23ai. It also helps you to meet security, performance, and supportability requirements, while offering a modern environment to support AI and ML capabilities.

4 Operate and optimize
Using automated monitoring tools, we streamline your Oracle Cloud operations to enhance productivity. In this phase, we perform issue resolution, SLA adherence, monitoring (support stage), and efficiency improvements, with flexibility to enhance and extend (improve stage).

Cognizant's OCI service offerings

OCI Advisory Offerings (Cloud Hosting):

Cognizant's CloudFit assessment services help you collect information about on-premises infrastructure and network details on routers, firewalls, subnets, and security setup. Based on this information, we then define enterprise end-state cloud architecture and right-size capacity for both performance and resilience.

As part of our advisory services, we create an optimized bill of material (BOM) for Oracle and non-Oracle workloads. And as an Oracle Cloud Managed Service Provider partner, we also procure tenancies and subscriptions and conduct the build.

Our advisory services help design the cloud migration roadmap by analyzing your readiness to cloud in terms of business applications and infrastructure requirements. Using a cloud solution roadmap based on data compliance, sovereignty, and regularity requirements, we create a solution on OCI public cloud, OCI private cloud offerings—like Cloud@Customer—or a multicloud solution using Oracle Database@Azure, AWS, GCP.

Whether your objectives are to close data centers, refresh legacy infrastructure, or optimize existing Oracle database licensing expenses and reduce TCO, our deep understanding of industry best practices can help you meet your future cloud goals.

OCI Lift and Shift Services (Cloud Migration):

Our cloud infrastructure services help businesses design, architect, and deploy resilient infrastructure that enables you to simplify, optimize, and transform workloads to create a future-ready solution—and harness OCI's full potential.

Our services align with Oracle's Exadata Cloud@Customer offerings for on-premises applications Cloud Move and Improve for Oracle and non-Oracle workloads to help improve agility, enhance performance, and drive cost efficiencies.

Oracle E-Business Suite, PeopleSoft, JDE, Hyperion, and OBIE offer rapid migration in as little as 16 weeks. Cloud migration services are driven by Cognizant's One-Click Cloud Accelerator Suite, which delivers 90% automation in cloud infrastructure provisioning and configuration.

OCI Managed Services (Cloud RUN Services):

Our managed services help you to continuously evaluate cloud-supported applications and the end-user journeys they provide. As a CSPE partner, we're your single point of contact to support the end-to-end stack, from infrastructure to application services, under unified SaaS-like service levels.

We have expert advisors and specialized tools and services for enterprise risk mitigation, monitoring, security, resilience and performance optimization. We automate workload management, extend the cloud environment, and manage regulatory compliance. With 24/7 support under a unified SLA, ITSM Framework, and a committed year-on-year service improvement strategy, we understand every aspect of your cloud infrastructure.

Benefits for organizations

Operational efficiency

Cloud modernization streamlines operations and offers automated processes and integration capabilities, helping you to become more agile and responsive.

Cost savings

Only pay for what you use through competitive pricing structures—up to 40% cost savings

Enhanced security

Benefit from the latest security protocols and tools to protect your data and applications

Performance improvements

Gain better performance and smoother user experiences compared to legacy solutions—30% to 70% increased performance

Advanced features

Drive innovation and stay ahead of competitors, including AI and ML adoption enablement

Regulatory compliance:

Stay compliant and avoid potential legal complications

Scalability

Easily adjust your resources to your exact needs—up to 90% accelerated provisioning

Customer success spotlight

A leading insurer sets a new course with agile, modern IT infrastructure

We helped a leading insurer migrate 75% of its IT portfolio (100+ custom applications and 50+ databases) from a legacy data centre to OCI. Using Exadata Cloud Service, we migrated the insurer's portfolio in half the expected time for greater stability, security, and efficiency.

The customer reduced CapEx and OpEx by 25%. On-demand scaling and provisioning also dropped from months to just minutes, enabling it to respond faster to business growth opportunities. Our cloud solution accelerators delivered 20% savings across the insurer's people, processes, and technology.

World's largest restaurant chain cuts costs by 50% and boosts performance with Oracle Cloud

We helped a leading restaurant chain migrate its diverse IT landscape—including 7+ global enterprise applications, 70+ servers, 65 TB production data, 37 environments, 10k+ users—to Oracle Cloud Infrastructure, as part of a cloud adoption roadmap.

Our customer reduced infrastructure spending by over 50%, in addition to improved batch processing and financial cycle reporting. The customer also achieved a 2x to 60x UI performance increase, depending on the application, boosting the 10,000-strong user experience.

Why Cognizant

Cognizant has deep industry knowledge that helps organizations drive meaningful transformation and is a proven business partner to some of the world's biggest brands.

Through our future-ready solutions on OCI—and our advisory services, innovation in accelerators and tools, and certified managed services—you can benefit from:

- **An end-to-end cloud service provider** that offers comprehensive application, infrastructure, and database solutions
- **Accelerated cloud migration** powered by a complete cloud transformation framework for seamless migration to the OCI platform
- **Less complexity** our CloudFit advisory services analyze your cloud readiness in terms of businesses and technology
- **Automation solutions** such as the One-Click Cloud Accelerator Suite for workload migration and automation, reduce effort by 25%
- **A leading Oracle partner** that's one of the top partners for cloud infrastructure transformation
- **Oracle Cloud expertise** that's ranked fifth globally, with the highest number of Oracle Cloud certifications
- **Flawless execution** our high win ratio of >75% is testimony to our dedication

Cognizant's Cloud Migration Accelerator Suite for faster ROI and rapid insights

Cognizant's One Click Cloud Accelerator Suite enables you to rapidly migrate Oracle and non-Oracle workloads, delivering 25% cloud infrastructure provisioning and configuration automation.

Move to a cloud-driven future—today

Cognizant is a strategic Oracle Partner and expert in delivering end-to-end cloud services. Ranked in the top five for Oracle Cloud certifications using digital learning for rapid skills advancement, we've helped countless organizations transform their businesses in the cloud.
